PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years of experience building enterprise applications, backend services, event-driven workflows, and customer-facing financial capabilities. Experienced with Java, Spring, Kafka, PostgreSQL, AWS, and modern application development. Currently extending this foundation into AI systems engineering, agentic workflows, local AI, and human-centered product development.

TECHNICAL SKILLS

Languages

Java, Kotlin, Python, TypeScript, JavaScript, C#, SQL

Data & Messaging

PostgreSQL, T-SQL, Kafka, SQS, SNS

Backend & Application Development

Spring Boot, Next.js, React, Node.js

Cloud & Infrastructure

AWS, Docker, Kubernetes, Jenkins, Argo CD, AWS CloudFormation

PROFESSIONAL EXPERIENCE

Senior Software Engineer — JPMorganChase

June 2024 – Present

Jersey City, New Jersey

Software Engineer II — Intuit

January 2022 – February 2024

Los Angeles, California

- Built a streamlined onboarding capability for new money-in and money-out transaction types, reducing the time to add a new transaction type from about 45 minutes to a few seconds.
- Designed and deployed a dual Kafka consumer that resolved idempotency issues affecting 32 operational-risk rules.
- Created a reusable capability for collecting W-9 information, reducing developer time on related work by a reported 70%.
- Led implementation of recurring cryptocurrency purchases and supported development and scaling of the platform's cryptocurrency buy, sell, and hold capabilities.
- Supported continuous integration with Jenkins and continuous delivery with Argo CD on Kubernetes, and enabled customer tax-form delivery through AWS Batch workflows.
- Implemented PagerDuty alerting integrated with AWS Lambda, S3, Batch, and CloudFormation to improve operational reliability.

Software Engineer III — IGT

October 2021 – January 2022

United States

Software Engineer — Sagitec Solutions

August 2016 – October 2021

Baltimore, Maryland area

- Built features for unemployment-insurance systems using C#, Python, JavaScript, and a proprietary .NET framework, including user registration, wage submission, claim submission, and self-service reporting.
- Developed correspondence-generation and BPM workflow capabilities, including scheduled batch jobs, and deployed changes to staging and UAT environments.
- Analyzed query plans and data models, using T-SQL and entity-relationship diagrams, to identify and improve slow-running database queries.

Software Engineering Intern, Data Analytics — Pitney Bowes

January 2016 – June 2016

Danbury, Connecticut area

- Built Python scripts using Pandas and XLRD to transform Excel data into structured formats for daily ad hoc reporting.
- Wrote T-SQL stored procedures to support reporting workflows.

SELECTED PROJECTS

Home Journey — Active Development

A notes-first platform designed to help households organize buying, owning, and maintaining a home as one continuous record.

- Designing Home Journey, a notes-first product concept for organizing home buying, owning, and maintenance as one continuous household record.
- Building the product's site and information architecture — problem framing, buyer and owner journeys, capabilities, and roadmap — with Next.js, TypeScript, and Tailwind CSS.
- Maintaining a public status roadmap that distinguishes active-development capabilities from planned directions as the product evolves.

EDUCATION

Northern Illinois University

2014 – 2016

Master of Science, Computer Science

Jawaharlal Nehru Technological University

2010 – 2014

Bachelor of Engineering, Computer Science
